**Suggestion For Sowing Seeds During the  
Summer Months**

During the hot months of July and August fine seeds such as Calceolaria, Cineraria, Snapdragon, and finer perennial seeds, etc., should be sown in flats (as usual) and the flats placed in a cool basement until the seedlings sprout, then taken to greenhouse and some cheesecloth placed over them until the seedlings are of sufficient strength to have it removed.

## **GULDEMOND'S**

### *"Surprise" Garden of Annuals*

There are more than one hundred different varieties in this mixture of seeds.

Sow the seeds as soon as the ground becomes warm, in rows 8 to 10 inches apart. Do not let the seed bed dry out. Thin seedlings to give the young plants room to develop. They should be spaced about 8 inches apart. **BE SURE TO KEEP THE WEEDS DOWN.** By following the above simple instructions, you will have a lovely flower garden from early summer till frost.

**LARGE PACKET, 50¢ Postpaid**
